Chapter 1 - The Apartment Is Full of Things, But Is It Actually Livable? 11

Chapter 2 - Why Does Unpacking Turn Into an Endless Project? 20

Chapter 3 - The Most Common Mistakes That Make Unpacking Take Twice as Long 31

Chapter 4 - Your Belongings Have Arrived, But Should They All Stay? 45

Chapter 5 - Before Unpacking Another Box, Prepare Your Workspace 57

Chapter 6 - How to Stop Unpacking from Taking Over Your Entire Life 68

Chapter 7 - Stop Fighting Your Apartment. Remove the Obstacles That Are Blocking Your Progress 79

Chapter 8 - Temporary Arrangements That Last for Years: How to Break the Cycle of Postponing Unpacking 91

Chapter 9 - A Practical Unpacking Plan: Where to Start and What Order to Follow 104

Chapter 10 - Unpack Smart, Not Just Fast: An Organising System That Saves Time 115

Chapter 11 - A Kitchen That Finally Works: How to Unpack and Organise the Most Important Areas 129

Chapter 12 - A Bedroom and Wardrobe Without Chaos: How to Reclaim Your Resting Space and Organise Your Clothes.....138

Chapter 13 - The Living Room, Hallway and Home Command Centre: How to Organise Shared Spaces So Everyone Can Use Them.....152

Chapter 14 - The Bathroom, Laundry Area and Household Storage: How to Organise Spaces That Need to Work Every Day.....164

Chapter 15 - When the Move Doesn't Go According to Plan: How to Handle Delays, Surprises and Household Chaos.....177

Chapter 16 - A Small Apartment, a Big Move: How to Unpack When Space, Time and Money Are Limited.....188

Chapter 17 - When Everything Gets Complicated: How to Regain Control After an Unsuccessful Attempt at Unpacking.....199

Chapter 18 - How to Maintain Order When Moving Stops Being the Main Event of Your Day.....212

Chapter 19 - The Last Boxes and the Final Decisions: How to Finish Moving Without Endless Reorganising.....228

Chapter 20 - A Reclaimed Home, a Reclaimed Peace of Mind: How to Manage Your Living Space Independently in the Future.....238

INTRO

The move is officially over. The keys fit the lock, your address has been changed, the furniture is standing more or less where it belongs, and you can even put a mug of coffee on the table. There is just one tiny detail: the apartment contains several dozen boxes that look as though they intend to stay permanently. Some are labelled. Others bear mysterious inscriptions such as "miscellaneous", "important" or "kitchen - probably". Still others have no labels at all because, during the packing process, someone decided that future generations would surely appreciate the element of surprise.

On the first day after moving, most people have ambitious plans. Everything will be unpacked over the weekend. Clothes will go into wardrobes, the kitchen will become functional, the bathroom will regain its dignity, and the living room will look like a place to live rather than a storage facility for a removal company. In your mind, you can already picture a beautifully organised home where every object has its rightful place. Then you open the first box and discover three chargers, two tablecloths, an instruction manual for an appliance you no longer own, and a mysterious cable that is probably important, although nobody knows why. An hour later, you are sitting on the floor, examining the contents and wondering whether it might be easier to buy a completely new life, complete with new furnishings.

This is the moment when many people begin losing their battle with unpacking. Not because they are incompetent, lazy or incapable of keeping things tidy. The problem is that moving creates an exceptionally inconvenient situation: all

your belongings are present at the same time, but none of them is where it should be. The item you need could be in absolutely any box, and that box could be behind a wardrobe, under a table, in the hallway or in a room you cannot enter without performing a series of precise manoeuvres resembling parking a lorry in a very narrow courtyard.

What's worse, unpacking is not a single activity. It is a series of decisions. You have to decide what to take out, where to put it, whether you need it, whether it is worth keeping, whether it suits your new home and whether there is even an appropriate place for it. Every decision costs a little time and energy. After several dozen similar choices, even someone with the best intentions starts putting the next box aside for later. And later turns out to be a date with an exceptionally flexible definition.

The most deceptive thing is that an apartment can look almost finished while still being completely dysfunctional. The kitchen is missing a few basic items, so preparing an ordinary meal requires something resembling an archaeological expedition. There is no free space for clothes in the bedroom because the wardrobe is full of things that have not yet been sorted. The living room serves simultaneously as a storage area, sorting station and temporary command centre. Meanwhile, the hallway resembles a distribution hub where every household member must demonstrate an ability to navigate obstacles.

Of course, you could try unpacking everything in order, from the first box to the last. It seems fair and logical. Unfortunately, an apartment does not operate according to the numbers printed on cardboard boxes. You do not need all your decorations, books and spare towels before you can

function normally. What you need is somewhere to sleep, the ability to prepare food, access to your clothes, a working bathroom and enough space to sit down without having to move three boxes first. Once these basic needs are taken care of, you can approach everything else with considerably more peace of mind.

That is why it is worth changing the way you think about unpacking. The goal is not to empty every box as quickly as possible. The goal is to gradually reclaim your home. There is an important difference. You can empty ten boxes and still have nowhere to eat your lunch. Alternatively, you can unpack three carefully chosen boxes, organise the kitchen, prepare a comfortable sleeping area and reclaim some space for relaxation. In the second scenario, the progress feels much more significant, even if the remaining boxes are still patiently waiting their turn.

This does not mean you need to immediately create a perfect plan, buy a complete collection of storage containers, labels and organisers, and then devote every spare hour to managing a domestic logistics project. Quite the opposite. The more complicated your unpacking system becomes, the greater the risk that it will turn into yet another task you do not feel like starting. A good solution should be simple enough to use even after an exhausting day, when the last thing you want is to make strategic decisions about the contents of a box labelled "living room".

In this book, we will treat your home as a space that needs to be gradually restored to everyday use. We will start by understanding the situation: what is genuinely getting in the way, which rooms matter most and why certain unpacking attempts involve enormous amounts of work but produce very little visible progress. We will also examine the

things that unnecessarily complicate the entire process, from moving belongings repeatedly between rooms to keeping absolutely everything just in case. Because if you transported three extension leads during the move without knowing what they were supposed to be used for, you do not need to establish a separate department to manage them now.

We will look at how to prioritise tasks, organise rooms, reclaim space and make sensible decisions about your belongings. What matters is not only what you take out of a box, but also where you put it so that you do not have to repeat the same work a few days later. We will explore how to unpack in stages, divide larger tasks into manageable sections and deal with situations in which you have more belongings than available space. We will not pretend that every apartment comes with perfectly designed wardrobes, unlimited floor space and residents who happen to have entire afternoons free for the next two weeks.

It is also important not to turn unpacking into a family competition over who is more to blame. Everyone may have a different idea about where things should go, a different working pace and their own attachment to particular belongings. One person wants to organise the kitchen immediately, another believes the books are the highest priority, while a third is convinced that the apartment cannot officially be considered inhabited until the decorations have been arranged properly. Sharing a living space requires agreements, but not every decision needs to become a lengthy negotiation. Sometimes it is enough to establish what is needed now, what can wait and who is responsible for a particular part of the work.

We are not assuming that everything will go according to plan, either. You might get ill, return to work, have other responsibilities or simply run out of patience with the sight of cardboard boxes. Some furniture may not fit the new layout, some belongings may turn out to be unnecessary, and buying suitable furnishings may have to wait until your finances are in a better position. These are normal limitations, not proof that your move has become an organisational disaster. Your home does not have to be finished in a single weekend for you to enjoy living in it.

There is one more thing that is easy to forget: after moving, you are allowed to rest. You do not have to earn an evening with a book, a film or a peaceful dinner by emptying a certain number of boxes. If you treat the entire apartment as one enormous unfinished obligation every single day, you will quickly stop enjoying your new surroundings. It is worth keeping at least one part of your home dedicated to ordinary living rather than constantly reminding you of all the work that remains to be done.

So imagine coming home one day and not having to move boxes just to reach the kitchen. You can open your wardrobe without risking an avalanche, find what you need without searching through the entire contents of the move, and sit down in a living room that has finally become a living room again. Perhaps a few boxes are still standing in the corner. Maybe one shelf is waiting to be installed, and the decorations have not yet found their permanent home. That is perfectly fine. Your apartment is no longer dominated by the move. It is becoming a place that belongs to you.

The boxes can stay a little longer. After all, they do not have a mortgage, utility bills or an obligation to clean up after themselves. You, on the other hand, have every right to

reclaim your rooms, your time and your everyday comfort. We will begin with what really matters.

Chapter 1 - The Apartment Is Full of Things, But Is It Actually Livable?

The first week after moving can be a strange experience. You are already living at your new address, you know the way to the nearest shop, you know which key opens the front door, and you have even started getting used to the noises coming from the neighbours. At the same time, ordinary activities still require a disproportionate amount of effort. To make breakfast, you need to find a frying pan. To find the frying pan, you have to open two boxes. To open the second box, you need to move the first one. And before you can move the first, you have to establish whether the bag sitting on top of it contains things you actually need or items someone packed at the precise moment when moving stopped being an ordinary event and started resembling an experiment in human endurance.

In this situation, it is easy to conclude that your apartment is simply untidy. That, however, is far too general a diagnosis. Post-move clutter has its own particular characteristics. It is not just a matter of things being in the wrong places. The main problem is that you do not yet know what those places should be, while some of your available space has already been occupied by belongings that are still waiting for a decision. With ordinary household mess, you generally have at least some idea where most things are. After a move, even someone who knows the household inside out can stare at a box and have no idea whether its contents are essential to everyday life or an archive of decisions made in a hurry.

That is why your first task should not be to unpack absolutely everything as quickly as possible. Before you start moving the contents of boxes around, establish what it actually means for your apartment to be functional. This will help you distinguish genuine progress from activity that merely looks impressive. Emptying five boxes may feel satisfying, but if everything inside ends up scattered across the floor and the kitchen is still unsuitable for preparing a meal, it is difficult to call that reclaimed living space. On the other hand, organising one cupboard, preparing a comfortable sleeping area and clearing the hallway can transform your everyday life far more than an entire day spent frantically moving objects from one place to another.

Stop Counting Boxes and Start Checking How Your Home Works

The most important question is this: which everyday activities can you already perform normally, and which still involve searching, moving things around or improvising? The answer will be considerably more useful than knowing that twenty-three boxes remain. The number of boxes tells you nothing about whether you have somewhere to sleep, whether you can prepare a meal or whether you can walk from one room to another without navigating an obstacle course.

Walk through your apartment and look at each room from the perspective of its basic purpose. Do not judge its appearance, decorations or whether everything is perfectly arranged just yet. Instead, ask yourself whether the room actually does what it is supposed to do. A bedroom should allow you to rest comfortably and access the clothes you need most often. A kitchen should make it possible to prepare food, wash dishes and find basic equipment. A

bathroom should provide convenient access to toiletries, towels and hygiene products. A living room should offer somewhere to sit and spend time normally, even if the bookshelf is not yet complete.

Pay particular attention to the difference between an unfinished room and a non-functional room. An unfinished living room might still have several boxes standing against the wall, but if you can comfortably use the sofa, coffee table and walking space, its basic purpose has already been restored. A non-functional living room, by contrast, might look almost empty but still offer nowhere to relax because the sofa is covered with bags and the only available seat is a chair borrowed from the kitchen. From the perspective of everyday life, the second situation is considerably more problematic.

For each room, check three things: accessibility, usability and safety. Accessibility means being able to enter, leave and reach the things you need without moving an entire construction of cardboard boxes. Usability means that the room allows you to perform the activities it was designed for. Safety includes such things as stable placement of heavy objects, clear walkways and the absence of items you could trip over. This is particularly important in areas you use in the dark and in places where you need to carry hot dishes, water or other things that require freedom of movement.

You do not need to create complicated documentation. A piece of paper, a note on your phone or an ordinary walk around the apartment with a few written observations will be enough. For each room, record what is already working, what is causing the biggest problem and which single issue would be most useful to tackle first. A note saying "kitchen - cannot access the pots" is much better than "kitchen -

mess". The first tells you what needs to be done. The second merely describes the emotional state of someone who has just discovered that all the spoons are in an unknown location.

A Map of Needs, Not a Map of Perfect Order

Once you know which rooms need attention, you can decide in what order to work on them. One of the most common mistakes is assuming that you should start with the room containing the largest number of boxes. This is tempting because a large pile of cardboard attracts attention and creates a powerful sense of urgency. However, the biggest concentration of belongings is not necessarily the biggest problem. One room might contain fifteen boxes of books that are not needed for everyday life. In another, a single box placed in front of a cupboard might prevent you from using the kitchen.

Your priorities should be determined by the impact each problem has on the lives of the people living in the apartment. Deal first with things that interfere with everyday activities, occupy essential space or create a safety risk. Only then move on to things that are mainly an eyesore. This does not mean that appearance is unimportant. Looking at boxes every day can be exhausting, particularly when your new apartment was supposed to represent a pleasant fresh start. But decorative order cannot replace a functioning kitchen or a comfortable place to sleep.

It helps to divide your needs into three levels. The first includes things essential for everyday functioning: sleeping, personal hygiene, preparing meals, getting dressed and moving around the apartment. The second concerns comfort: somewhere to relax, access to frequently used belongings and the ability to handle daily responsibilities

without constantly searching for things. The third involves finishing touches and aesthetics: decorations, additional furnishings, organised collections, books arranged according to your personal system and objects that give the apartment its individual character.

This order is not a universal law. If you work from home and need a functioning workspace, preparing it may be just as urgent as arranging your bedroom. If you have young children, creating a safe area for them to move around and storing potentially dangerous objects out of their reach will be particularly important. If someone in your household has limited mobility, clear walkways and appropriately positioned furniture may take priority over many other tasks. What matters is the actual situation of the people living in the apartment, not the order of rooms suggested by some random guide.

Imagine an apartment where the kitchen is almost ready, the bedroom is functional and the living room still resembles a warehouse. You could start with the living room because it contains the most boxes. Alternatively, you might notice that nobody in the household has a comfortable place to sit in the evening. If the lack of somewhere to relax is beginning to affect everyday life, the living room becomes a priority. You do not have to unpack everything in it, though. You simply need to regain access to the sofa, coffee table and walkway, while temporarily gathering the remaining boxes in one safe location. The room becomes usable even though it is not finished.

A Room Does Not Have to Be Finished to Be Reclaimed

It is worth accepting that each room can pass through several stages of functionality. First, it needs to be accessible. Then it needs to become usable, followed by

comfortable, and only at the end does it need to look the way you originally imagined. This means you do not have to wait for a perfect result before you can start feeling the difference.

In practical terms, you can consider your kitchen functional enough when you have access to basic dishes, cutlery, a saucepan, a frying pan, a chopping board and the food products you use most frequently. You do not have to unpack every baking tin, spare plate, appliance you use twice a year and complete collection of storage containers that have spent the last few months living in their own separate universe. Similarly, your bedroom does not require every item of clothing to be perfectly organised immediately. First, you need somewhere to sleep, access to the things you use every day and enough space to move around comfortably.

A useful approach is to establish one visible completion criterion for the first stage of each room. It could be the ability to prepare a simple meal without searching for equipment, open your wardrobe freely, access the bed from both sides where necessary or reclaim somewhere to sit. The criterion should describe an activity you can actually perform rather than a vague impression of tidiness. "The living room is ready" is rather imprecise. "You can sit on the sofa, walk to the window and use the coffee table" describes a concrete result.

Do not try to bring every room to exactly the same level of completion at the same time. This approach often leads to a situation where a little work has been done everywhere, but nowhere is there any obvious improvement. Boxes have been opened, belongings have been spread around, shelves are partially filled, and the apartment still requires you to

navigate obstacles constantly. It is much better to bring one room to the point where you can use it normally, and then shift your attention elsewhere.

Of course, you will not always be able to work exclusively in one room. Sometimes you will need to remove an item from a box that belongs somewhere else, or move some equipment to access a cupboard. What matters is preventing these actions from turning into an uncontrolled migration of belongings. If you find a book while organising the kitchen, you do not need to carry it straight into the living room, start arranging the bookshelf and then abandon your kitchen work. Put it in a designated place for items belonging to other rooms. You can deal with it when you turn your attention to the appropriate space.

Your Move Has a Scale, and So Do Your Capabilities

One of the most important elements of planning is taking your available time and energy into account. Many unpacking plans are created in the imagination of someone who has not actually started working yet. In that imaginary version of events, Saturday is completely free, everyone in the household is in a wonderful mood, and the boxes practically open themselves. Reality may look rather different. Someone has to work, someone needs to do the shopping, there are formalities to deal with, a parcel needs collecting, dinner needs preparing and everyone still needs a little time to rest. There is no point creating a plan that requires availability you simply do not have.

Think about how much time you can realistically devote to unpacking on an ordinary day and how much you might have on a day off. Do not schedule every available hour. Leave some room for unexpected responsibilities and recovery. If you have an hour, you can organise one drawer, unpack

some essential equipment or remove obstacles blocking access to a piece of furniture. You do not have to finish the entire room in that time. A well-executed, clearly limited task is more valuable than starting several jobs that you will not have time to complete.

If you live with other people, take their needs and capabilities into account as well. Do not automatically assume that everyone will work at the same pace. Someone may have more free time but less physical strength for carrying heavy objects. Someone else may be very good at making decisions but unable to spend time unpacking during the working week. A shared plan should be based on an actual division of responsibilities, not on the assumption that every household member has exactly the same number of free hours and the same tolerance for bubble wrap.

At the end of your initial assessment, choose one room where you will begin the actual work. It does not have to be the room with the most boxes. Choose the one where improvements will make the biggest noticeable difference to everyday life. Write down what needs to change, which obstacles need to be removed and what result will mark the completion of the first stage. Then leave the other rooms alone, unless they require urgent attention for safety reasons or because of essential everyday needs.

This might seem like a very small step compared with the entire apartment. Yet after moving, these are precisely the steps that offer the greatest value. You do not need a perfect home just yet. You need a place where you can function normally, rest and find your own belongings without organising a research expedition. Once your apartment begins to regain its basic functions, unpacking will stop looking like an abstract mountain of work. It will become a

collection of specific tasks that can be completed in a sensible order.

Chapter 2 - Why Does Unpacking Turn Into an Endless Project?

There is a particular kind of exhaustion that comes with unpacking. It does not necessarily involve carrying heavy boxes or moving furniture. Sometimes all it takes is opening a single box to feel as though you have just been appointed manager of a highly complicated company whose entire business consists of moving objects from one place to another. Every item requires a decision, every decision raises another question, and every attempt to organise the situation produces even more belongings on the floor.

You start with a box labelled "bedroom". Inside, you find bedding, several books, an extension lead, a toiletry bag, a picture frame and three small objects whose purpose you cannot remember. The bedding should go into the wardrobe, but the wardrobe is still partly occupied by clothes. The books belong in the living room, but the bookshelf has not been prepared. The extension lead might be useful in the kitchen, and the picture frame needs a suitable place. The toiletry bag belongs in the bathroom, where other belongings are currently being organised. Ten minutes later, the contents of the box are scattered across five different locations, and the box itself is still not empty.

This is how one of the greatest paradoxes of unpacking develops: you can work intensively all day and still feel in the evening that your apartment looks worse than it did in the morning. It is not always the result of insufficient effort. Often, the problem lies in the way the work is organised. Unpacking is a process in which one action triggers another,

and an ill-considered sequence of tasks means that instead of completing things, you constantly create new ones.

To break this pattern, you need to understand why it is so easy to fall into it. Once you do, you can stop treating every setback as proof that you are incapable of organising yourself. You will see that many of the difficulties come from predictable mistakes that can be reduced.

A Box Is Not a Ready-Made Task

One of the biggest problems often begins during the packing process itself. While preparing for a move, belongings are placed in boxes according to the available space, the pace of work and the circumstances at the time. When time is running out, protecting your possessions becomes more important than assigning everything to perfectly organised categories. As a result, one box might contain objects from several different drawers, shelves and rooms. During packing, this can be a practical solution. After moving, however, it becomes a source of additional work.

A box labelled "kitchen" might contain plates, spices, appliance documentation, batteries, a few candles and an extension lead. This happens because those objects were close to one another when you were packing, or because there happened to be some spare space in the box. The label therefore provides only partial information. It does not guarantee that the contents form one logical group.

It is important to understand the difference between the place where an object was packed and the place where it should be stored. These are two completely different systems of organisation. The first describes the object's history; the second should make your future life easier. If you consistently recreate the old arrangement, you may end

up transferring all its impractical solutions to your new home as well. A drawer that was overcrowded in your previous apartment will not suddenly become more spacious simply because it has changed address.

That is why, when you open a box, you should not automatically put everything back where it probably came from. First, consider what each item is used for and how frequently you use it. Only then decide where it should live in your new apartment. This is particularly important when the layout differs from your previous home. Items used together should be stored close to one another whenever possible, while everyday essentials should remain easy to access.

Imagine that all your cleaning supplies used to be stored in one cupboard in your previous apartment. In your new layout, that cupboard is already occupied, but there is an empty recess in the hallway. Instead of forcing the old system to work, you can create a new and more convenient arrangement. Moving gives you an opportunity to examine whether your previous solutions were actually any good. You are not obliged to recreate every household habit simply because it has survived for several years.

Opening Too Many Boxes at Once

Another common mistake is starting work on several boxes simultaneously. It seems sensible, particularly when you want to quickly check where particular belongings are. You open a kitchen box, then one from the living room, followed by a bedroom box because you suddenly remember that you need a charger. Before long, you have several open containers surrounded by objects that do not yet have an assigned place.

This approach increases the number of things demanding your attention. Every open box represents an unfinished task. You have to remember what is still inside, what has already been removed and which objects require a decision. If you interrupt your work to prepare a meal or answer a phone call, you return to an apartment full of unfinished processes. These are precisely the things that create the impression of chaos, even when you have already completed quite a few useful activities.

A much better approach is to limit the number of boxes you work on simultaneously. Choose one, inspect its contents, sort the items and bring the task to a sensible stopping point. This does not mean that absolutely everything must immediately find its permanent place. It means that you know what has happened to the contents and which items still require a decision.

If a box contains belongings intended for different rooms, prepare a designated place for items that need to be moved later. Do not carry every object immediately to the other side of the apartment. For example, you could use one small storage crate or basket for belongings that belong elsewhere. The important thing is not to turn this area into another indefinite storage facility. Its purpose should be limited to collecting items discovered during your current task, rather than storing everything you do not feel like dealing with at the moment.

It is also useful to distinguish between putting something aside temporarily and postponing a decision indefinitely. If you find an object that belongs in the living room, you can place it in a container designated for that room. You then know where to find it and when to return to the matter. If you simply put it on the first available surface, there is a good

chance that a few days later you will be wondering once again where it came from.

The Trap of Temporary Places

In a new apartment, almost every free surface seems like the perfect place to put something down temporarily. A table, chest of drawers, kitchen worktop, chair or windowsill can all become a short-term storage area. Initially, this seems practical. You do not have to make an immediate decision about every object, and everything remains within reach.

The problem begins when these temporary places start multiplying. Belongings from boxes land on the table, items taken out of bags end up on the chest of drawers, and clothes that were supposed to go into the wardrobe are left on a chair. At some point, there is no free surface left where you can comfortably work. To organise one item, you first have to move five others.

This phenomenon has a particularly unpleasant feature: it feeds on itself. When there is no room to put things down, you start using additional surfaces. The more surfaces you occupy, the harder it becomes to find space for the belongings that genuinely need your attention. Eventually, even preparing an ordinary meal can require a small logistical operation.

That is why it is worth establishing a limited number of temporary storage areas from the beginning. The idea is not to forbid yourself from putting things aside, but to know where items awaiting a decision are allowed to go. One place for belongings from other rooms, one for objects requiring further consideration and, if necessary, one for things intended for donation or sale. These do not need to

be large areas, but they should have clearly defined boundaries.

If the place designated for items awaiting attention starts becoming overcrowded, treat that as a signal that decisions need to be made. Do not simply add another bag beside it. Check what is already there and resolve the matters you can close. This prevents your temporary organisation system from becoming a permanent feature of the apartment.

Pay particular attention to surfaces that serve an important purpose. The table should allow you to eat a meal, the kitchen worktop should provide space for food preparation, and the bed should be used for resting. Turning these areas into your main sorting stations is not a good idea because you deprive yourself of the ability to use your home normally. If you need a workspace for unpacking, designate one consciously and restore its original function when you finish.

Decision Fatigue Is Just as Real as Physical Fatigue

Unpacking requires you to make a large number of small decisions. Should you keep this item? Where should it be stored? Do you need it every day? Does it suit your new apartment? Does it belong to someone else? Could you give it away? Each question seems simple, but the number of decisions quickly adds up.

After several hours, you may feel like keeping everything, throwing everything away or closing the box and pretending you never saw it. All three solutions can seem attractive, depending on your level of exhaustion. Unfortunately, none of them is a particularly good decision-making system.

It is therefore worth separating decisions that need to be made immediately from those that can wait. You do not have
